

CURVED RAFTER (10' projection)

Adjustable from 116 1/2" to 122 1/2"

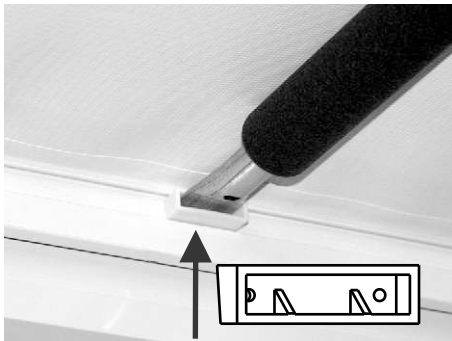

Adapts to all roll-up awning with 10' projection.

Our adjustable curved rafter is easy to extend or shorten up to 6 inches with a practical adjustment available at each inch. It is slightly curved on all its length and it will adapt to all 10' projection roll-up awnings. This product is mainly used to prevent water accumulation on the awning.

When installed on an awning without an add-a-room, we recommend to install the curved rafters every 30 to 36 inches. Also included with the curved rafter, a very practical receptacle which will assure you an excellent installation of the flat edge of the pipe on your RV. Rafters are also covered up with a foam to protect your fabric against scratches.

Receptacle
