

Uniguard™

Top quality protection to prolong the life of your fabric

The Uniguard adapts to almost any roll-up awning.

The price of the Uniguard option must be added to the existing prices of these products.
 In all cases we must cut down the projection of your fabric in order to install the Uniguard because it has 12".
 Only the awnings with long hardware will be able to obtain the extra 12" of projection.

The Uniguard enhances the appearance of the awning. It provides your fabric a good protection when awning is closed and increases overall the rigidity. Ask for the Uniguard when you order the awning or the universal replacement fabric. To have the Uniguard installed on an existing awning, you will need to send in to us the fabric at your expense to have it resized. Foresee additional labor charges of 50\$.
 The fabric inserted into our Uniguard must have the small bead.

Important: You must require an RGA return # and clearly indicate it on the box.
